

Empowering Healthcare Organizations of all Sizes to Quickly Enter or Expand Clinical Research

BEK TRANSLATE - Standardizes entire EMR data, both structured and unstructured

Access to structured and physician notes for clinical research functions

NLP Mapping of 400+ combined libraries

Limited IT requirements (less than 4 hours)

Daily data refreshes

BEK GALILEO - Conduct one feasibility across entire research network in less than two hours

The most advanced feasibility product available capturing 300% more trial criteria

Evaluate your entire research network all at once

Detailed reporting on protocol demographics, trial attrition to help improve your business development

Proactively market your patient population to sponsors

BEK AUTORECRUITER - Automated chart reviews that screen 100% of patients with over 90% accuracy

Automated patient chart review for clinical trials Increase enrollment rates by 2.5X and expand trial portfolio Decreases the burden of manual tasks on research teams Every patient who is eligible for a trial is rapidly identified

BEK SITEWORKS - A CRM designed for research teams to facilitate provider and patient engagement while reporting performance

Communicate with staff and patients about research opportunities

Track and monitor patients through the enrollment journey

Alert providers proactively of eligible patients

Automated performance reporting

CORE VALUE TO HEALTH SYSTEMS

INCREASED RESEARCH REVENUE - BEKHealth optimizes resources so researchers can allocate more time to enrolling and seeing patients. Customers utilizing BEKHealth see an average of 2.5 times the enrollment rates

EXPAND TRIAL PORTFOLIO - Identify qualified patients with granularity across your entire network. Customers utilizing BEKHealth have increased the number of trials per research coordinator by 3x

INCREASE DIVERSITY OF TRIALS - Our solution extracts over 90% of eligibility criteria, allowing you to curate your ideal patient selection

Designed by Researchers For Researchers

The BEKHealth solution is the most advanced system for ingesting EMR data, conducting trial feasibility and identifying protocol eligible patients for clinical trials.

Our solution covers more than 95% of the trial protocol which leads to unprecedented accuracy and operational improvement. By taking out manual tasks, researchers can allocate more time to enrolling and seeing patients.
