---

epitomyze™

clinical photography mobile app

Document. Standardize. Analyze.™

- capture the "right" clinical photograph
- decrease staff time and expense
- automatically and securely transfer images to the EHR
- capture images at the same distance and orientation as previous photographs
- securely view and search the images from anywhere

We have developed software which allows mobile devices to easily capture and accurately reproduce clinical photographs over time, providing "apples to apples" before and after comparisons of clinical results. All images and associated documents can be tagged (by procedure, diagnosis and location), searched and securely shared with other providers, patients or payers.

Most Advanced

Our patented mobile application is among the most advanced in the industry and is used by some of the largest hospitals in the country.

EHR Integration

Although our image management platform, ImageStore®, can operate as a stand alone service it was also designed for integration and interoperability with the EHR.

Highly Accurate

Capture perspective-perfect, "apples to apples" before and after photos for comparison and to support clinical decision making.

Easy to use

Our clean, simple and intuitive user interface requires little or no training. You can be up and running the day you sign up.

Price Competitive

Other than an iPad, there are no expensive or complicated hardware or mechanical positioning systems needed to take quality clinical photographs. epitomyze™ costs a fraction of other clinical photography systems.

HIPAA Compliant

Our end-to-end image capture and management solution is HIPAA compliant and meets or exceeds industry standards.
