

Clinically intelligent intake that writes patient notes and improves patient satisfaction.

You strive to keep patients healthy and happy, from the moment a patient makes an appointment, to the minute they greet their provider, and beyond.

But lengthy intake forms means patients get frustrated filling out page after page, and clinical documentaiton requirements mean providers spend more and more time looking at computer screens and less time connecting with patients.

It's time for change. It's time for Health Note.

Patient-friendly Intake

80% of patients complete Health Note intake ahead of the visit, making check-in more pleasant for staff & patients.

Deep EHR Integration

Patient responses push directly to your EHR instead of a PDF, reducing the need for double entry by support staff & giving your clinic an efficiency boost.

Prewritten Clinical Notes

Clinical data such as HPI is easily reviewed and added to clinical notes, reducing time spent on documentation for care teams.
