

Allscripts Guided Scheduling

In today's healthcare environment, optimizing provider schedules is a primary goal. In doing so, it helps improve outcomes, such as operational efficiency and overall practice profitability.

Using proven principles from the airline industry, Allscripts® Guided Scheduling (fully embedded into Allscripts® Practice Management) can identify and schedule patients with urgent needs faster, while increasing revenue and streamlining operations.

Highlights of Allscripts Guided Scheduling:

Fully integrated within Allscripts Practice Management

Guided Scheduling ensures patients who need care the most have access to appointments, even at the last minute.

Provider schedule optimization

Schedules are managed based on predicated demand, ensuring schedule slots are not left empty due to demand changes. Patient visits are distributed across multiple resources.

Optimization Readiness analysis

Optimization Readiness provides algorithms and predictive analytics for a practice data assessment, giving insights into potential opportunities and scheduling efficiencies.

Maximize operational efficiency

Guided Scheduling helps organizations achieve operational efficiency by prioritizing visits for patients who need care the most, which accelerates revenue and ensures high-quality care delivery.

Ongoing improvement

Post-go-live adoption reporting ensures a smooth implementation. Monthly operational reporting and quarterly performance reporting deliver organizations multi-faceted insights into how the practice is improving.
