

Why Choose Provation® SurgicalValet™?

Provation® SurgicalValet™ is trusted by hospitals and health systems throughout the nation because it simplifies and standardizes preoperative workflows to:

- Decrease case delays and cancellations
- Improve operational efficiency
- Increase lead time for screening
- Reduce preoperative testing
- Improve patient outcomes
- ...and more!

TOP 3 Benefits Provation® SurgicalValet™ Brings to Each Key Stakeholder

Surgeons

1. Increases efficiency and case throughput by standardizing preoperative workflows, optimizing patient readiness, centralizing relevant documentation, and enhancing care team communication
2. Identifies scenarios that could lead to delays or cancellations earlier in the process to avoid anesthesia having to make a last-minute call on a case
3. Generates personalized patient instructions, tests, and consults to ensure patients are medically optimized prior to the day-of surgery

Anesthesia Providers

1. Automatically identifies high-risk patients and offers built-in clinical decision support to ensure patients are medically optimized prior to the day of surgery, decreasing the chance of having to delay or cancel a case day-of
2. Aggregates the most pertinent pre-procedure patient data to make reviewing a patient's history and status quick and efficient
3. Helps anesthesia groups capture and report quality, maximize MIPS and MACRA bonuses, avoid CMS penalties, and demonstrate value

Top 3 Benefits Provation® SurgicalValet™ Brings to Each Key Stakeholder

Operational Nurse Leaders

1. Built-in clinical decision support uses patient comorbidities, health history, age, BMI, and procedure risks to generate patient-specific care plans
2. Standardizes PAT processes, identifies high-risk patients, provides visibility and tracking of all relevant documentation, and leverages clinical decision support to ensure patients are optimized prior to surgery
3. Optimizes operational efficiency by eliminating manual processes, reducing in-person patient screening time, tracking patient readiness, and organizing necessary documentation to properly prepare patients for surgery

Executives

1. Integrates with, and adds a layer of clinical decision support to, the EHR you have already heavily invested in
2. Helps reduce waste related to clinical hours, manual processes, and unnecessary testing
3. Diverts your staff's time from inefficient, manual processes to patient care

IT

1. Cloud-based perioperative care coordination solution that integrates with most major EHRs, via FHIR-based APIs, to address perioperative problems across an organization
2. Minimal IT footprint with no updates to run or server backups to maintain
3. Low lift, turn-key platform includes medical content development, build, and maintenance, as well as 24/7/365 data monitoring and security from Provation and Microsoft® Azure®

Patients

1. Reduces unnecessary in-person pre-screening visits with an online intake form
2. Generates personalized and easy-to-understand preoperative instructions
3. Identifies appropriate tests and consults to eliminate excessive testing and patients bearing financial responsibility for tests that are not medically necessary
