

Save Time on Every Patient Visit.

The leading AI Assistant, generating complete clinical documentation.

Reduce time spent on documentation and administrative tasks with the power of Tali's AI Scribe, Medical Dictation, and Voice Virtual Assistant.

AI Scribe

Medical Dictation

Medical Search

EHR Assistant

AI Scribe

Let Tali create notes for you so you can focus on your patient.

Tali's AI Scribe will generate a summary just from listening to your conversation with your patient, no special hardware required.

Record your patient visits in **multiple languages**, and Tali will produce a summary in the language of your choice.

Medical Dictation

Dictate your notes and Tali enters them directly into your EMR.

Tali uses advanced Natural Language Processing (NLP) algorithms, medical language models, and medical speech recognition solutions to achieve high accuracy in a clinical setting.

Medical Search

Ask medical questions, including drug and dosage information, and know that the answers come from trustworthy sources like Merck Manuals, Choosing Wisely, and Open FDA.

EHR Assistant

For integrated EHRs, Tali's EHR Assistant will let you use your voice to perform common commands like creating a reminder or opening a form.

Works on Every Computer and Phone

As you move between exam rooms and computers, your notes follow you as you go. Create notes on your phone, or on one computer, then access them later on the next computer. Tali is available as Web App, on Mac or Windows, iOS or Android.
